a) On March 15, 2021, the Company executed a Definitive Agreement with Metalla Royalty & Streaming Ltd. (MTA) ("Metalla") for the sale of the Company's Net Smelter Return ("NSR") royalty from gold production at the CentroGold Project (also referred to as the Gurupi Project) located in Maranhão State, Brazil and 100% owned by Oz Minerals Ltd. The NSR is comprised of a 1% net smelter return on the first 500,000 ounces of gold sold, a 2% net smelter return from 500,001 to 1,500,000 ounces of gold, and a 1% net smelter return on gold sales exceeding 1,500,000 ounces of gold.

The NSR was sold for an aggregate consideration valued at up to US\$18,000,000 receivable as follows:

- Immediate: \$7.0 million in cash upon executing the Definitive Agreement (received);
- Milestone 1: \$7.0 million in Metalla common shares upon grant of all project licenses, the lifting or extinguishment of the injunction imposed on the CentoGold Project with no pending appeals and, if necessary, the completion of any and all community relocations; and
- Milestone 2: \$4.0 million payment to Jaguar in cash upon the CentroGold Project achieving commercial production.

The Company recognized \$7.0 million as consideration received from the sale of the NSR. The amounts noted above relating to Milestone 1 and Milestone 2 were not recognized, given that the completion of these milestones is dependent on the performance of an unrelated third party. As a result of the sale, the Company (i) transferred its NSR title to Metalla and derecognized the \$8.5 million CentroGold project royalty, (ii) received and recorded \$7.0 million in Cash, (iii) recorded \$0.2 million in legal and consulting costs associated with the transaction, and (iv) recognized a \$1.7 million loss on sale of the CentroGold royalty interest to Other nonoperating expenses in its condensed interim consolidated statement of operations and comprehensive income.

17. Capital disclosures

The Company manages its capital structure in order to support the acquisition, exploration and development of mineral properties, and to maximize return to stakeholders through a flexible capital structure which optimizes the costs of capital and the debt and equity balance. The Company sets the amount of capital in proportion to risk by managing the capital structure and making adjustments in light of changes in economic conditions and the risk characteristics of the underlying assets. To adjust or maintain its capital structure, the Company may adjust the amount of long-term debt, enter into new credit facilities, issue new equity, or enter into new customer advance arrangements.

18. Financial risk management and financial instruments

Liquidity risk

To manage its liquidity risk, the Company undergoes an in-depth budgeting process each year which is supplemented by a continuous detailed cash forecasting process. Future financing requirements, if any, will depend on a number of factors that are difficult to predict and are often beyond the control of the Company. The main factors are the realized price of gold received for gold produced from the Company's operating mines and the operating and capital costs of those mines. Other key factors include the Company's ability to continue to renew its Brazilian loan facilities and manage the payment process relating to its Brazilian labour provisions (refer to Note 8).

Derivative financial instruments

The Company assesses its financial instruments and non-financial contracts on a regular basis to determine the existence of any embedded derivatives which would be required to be accounted for separately at fair value and to ensure that any embedded derivatives are accounted for in accordance with the Company's policy. On an ongoing basis, the Company evaluates its price risk and currency risk and, when envisioned to be beneficial, engages in derivative financial instruments to manage these risks, including gold forward contracts, gold price collar contracts, gold call option contracts, and foreign exchange call and put option contracts. As at June 30, 2022, the Company did not have any derivative positions outstanding (December 31, 2021 – nil positions outstanding).

1) Price risk

The Company is exposed to price risk with respect to gold prices on gold sales. The Company evaluates price risk and, when envisioned to be beneficial, may enter into hedge contracts to manage this risk and to secure future sales terms with customers. The Company does not use hedge accounting for these instruments and gain and losses are recorded in earnings as fair value changes occur as a component of revenue. In the three and six months ended June 30, 2022, the Company did not enter into any price hedge contracts (nil price derivative contracts in the three and six months ended June 30, 2021).

2) Currency risk
